

HERE'S HOW IT WORKS

HOPKINSVILLE ELECTRIC SYSTEM | ENERGYNET

Issue Date: 8/28/2018

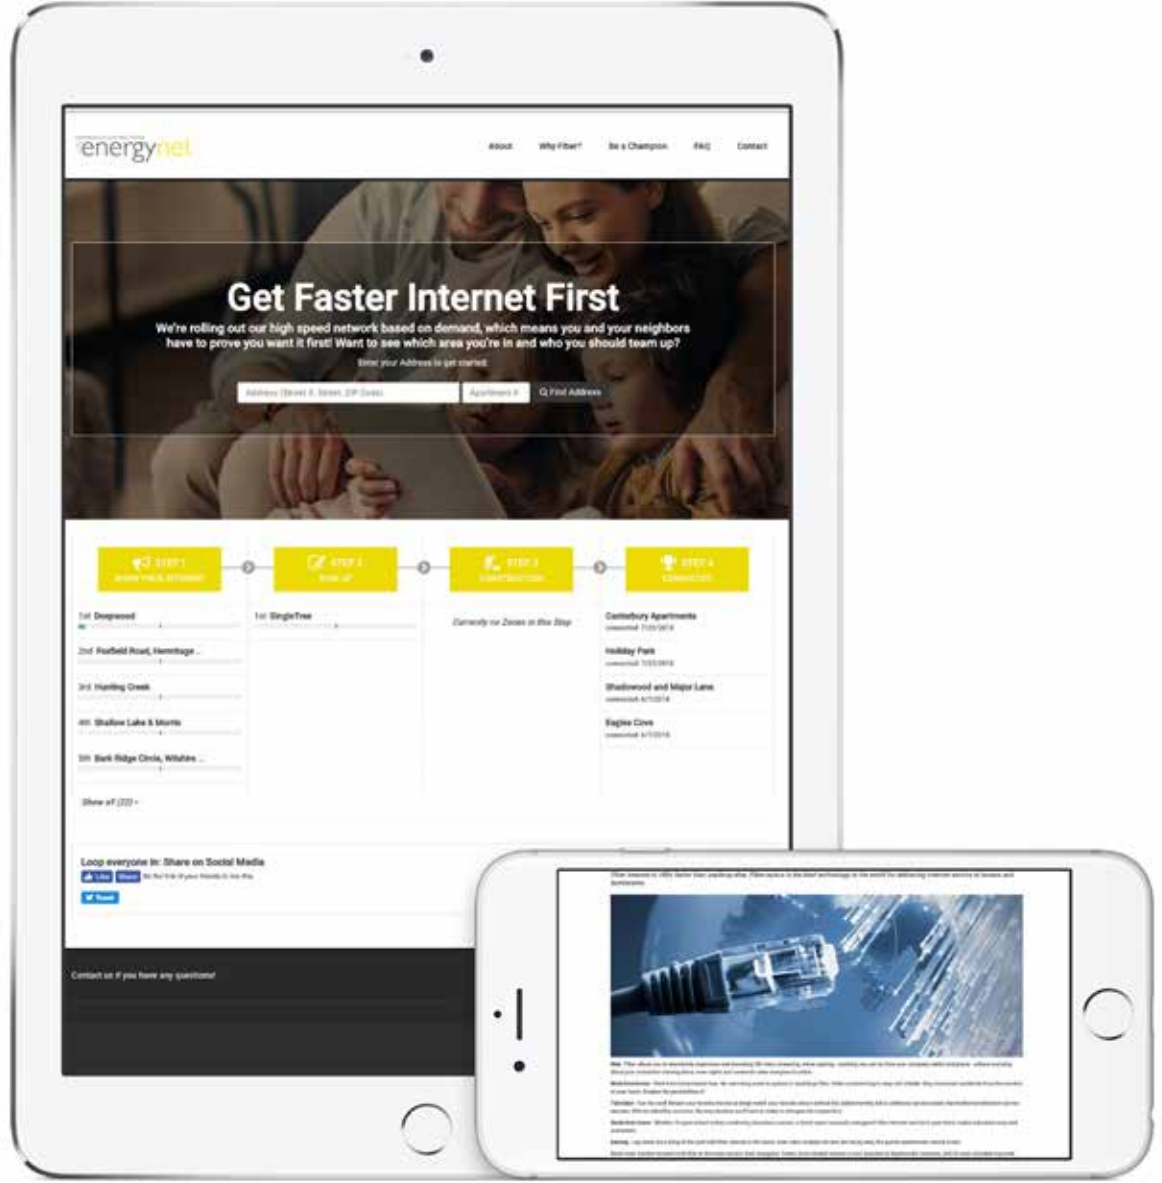

LET'S CONNECT

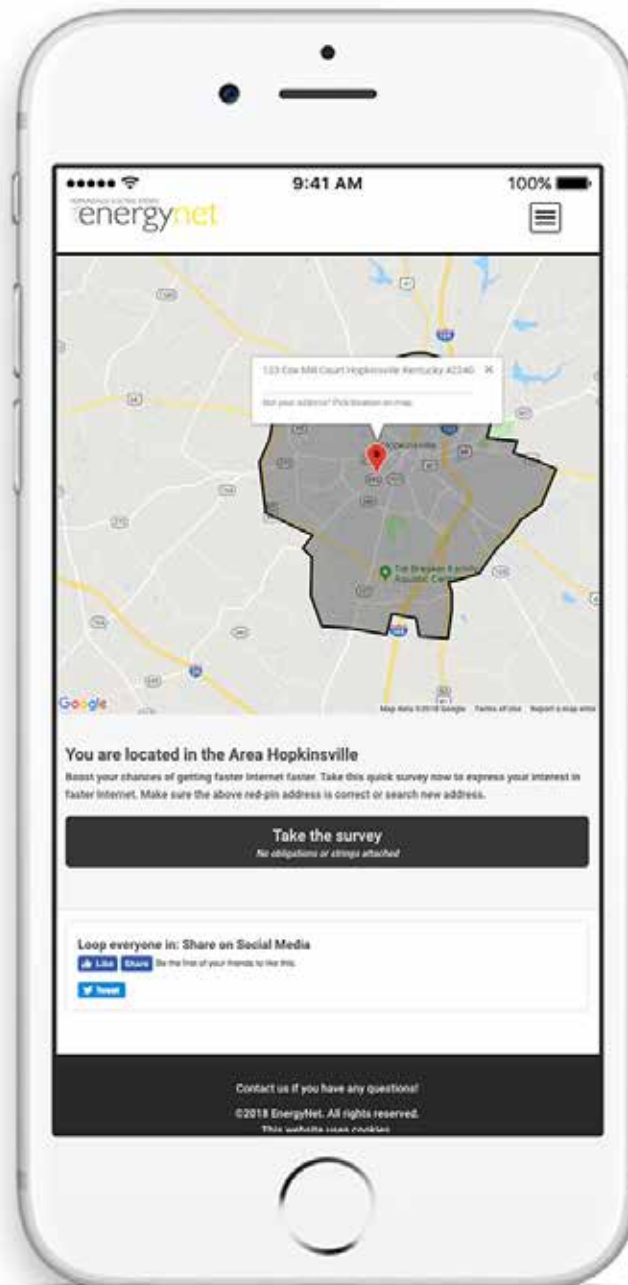

energynet connects people, ideas, and communities. energynet allows families to connect with each other. energynet makes business easier, more nimble, more advanced. energynet connects skills and expertise with the people that need it the most.

In its literal sense, it's what we do. In a more emotional context, it's what our product means to our customers. Let's connect.

Hopkinsville Electric System has always believed in commitment to community first - that's why the locally owned and operated utility makes the best decisions for energy future together with its customers. Now, with sister company energynet's investment in fiber internet service to the home, that philosophy of connection is shared.

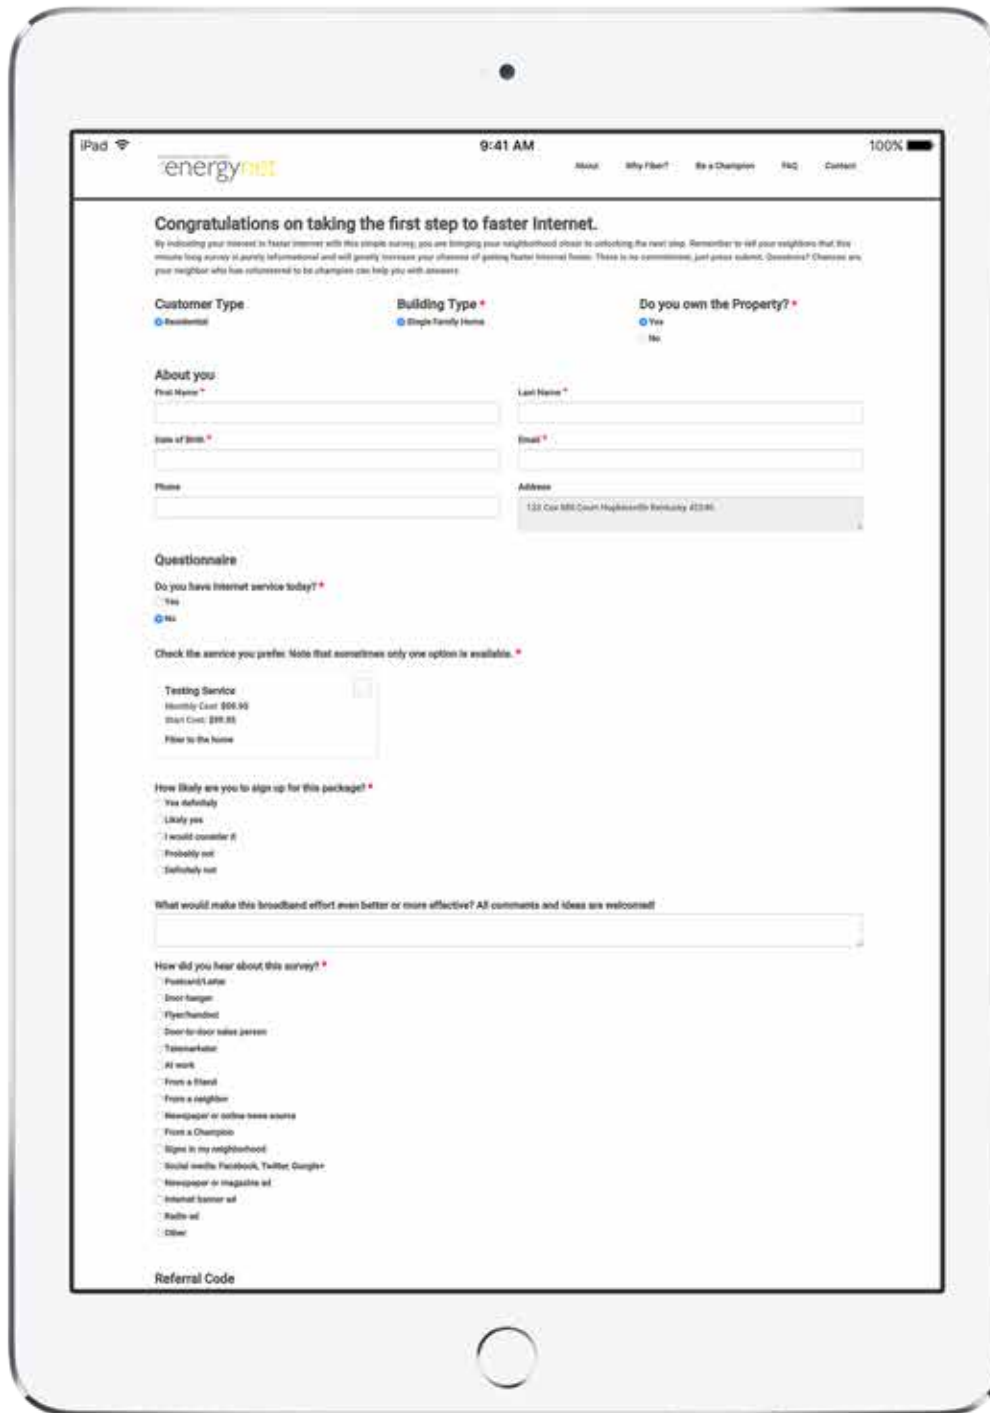

The logo for energynet features the word "energynet" in a lowercase, sans-serif font. The "net" portion is highlighted in yellow, while the rest of the word is in a dark grey color. To the left of the "e" in "energynet", there are several horizontal lines of varying lengths, resembling a stylized signal or data stream.

HOPKINSVILLE ELECTRIC SYSTEM

energynet

We would love to deploy faster internet service city-wide all at once, but the reality is the implementation of the new network requires a pretty significant construction process.

We developed the goenergynet.com system so that we can learn which areas of Hopkinsville are interested in receiving faster energynet service first. When you visit goenergynet.com, just input your address and take the survey to let us know you're interested. When your neighborhood shows enough interest (you can also track that progress on the site), we'll be able to make plans to head your way!

AND - you may be in a service area that's gotten an upgrade on existing internet service. Give us a call to find out, 270-887-0763.

LET'S CONNECT

WHY FIBER?

In less than a decade, we've seen the way we consume information, how we communicate, change drastically. With the emergence of smart phones, tablets, computer-powered everything, the technological infrastructure that was once a luxury is now part of our infrastructure. The demand on our digital infrastructure is not something we want to outpace our capabilities, and so we are taking steps to ensure Hopkinsville is positioned to meet the technological needs of its residents by implementing a gigabit network.

The new energynet gigabit internet service is 100x faster than anything else. Utilizing fiber technology, energynet allows you to seamlessly experience web browsing, HD video streaming, online gaming - anything you can do from your computer, tablet and phone - without worrying about your connection slowing down.

A 45 minute TV show will download in 1.7 seconds on gigabit fiber internet. A 2 hour video can be downloaded in as little as 16 seconds with gigabit internet service.

Reliability is a huge user concern when it comes to internet service, and fiber infrastructure is second to none when it comes to reliability. Users depending on security systems powered by wifi connections using a fiber network like energynet can have peace of mind. Students taking online courses depending on strong connections no longer have to worry about their internet connection with fiber.

Bandwidth, the ability to carry information, is one billion bits per second with the gigabit fiber network. That means the family simultaneously streaming a movie, playing a multi-user online game, working from the kitchen table, and studying in their room can all co-exist happily online.

While the network can't be built all at once, fiber is especially good for rural areas as it allows for quicker scale expansion. Hopkinsville and Christian County residents should utilize goenergynet.com to express their interest in being in the next phase of the scaled implementation of energynet's fiber network construction.

IMPACT AREAS

economy | business development | startups & home-based business | workforce | education | home values | relocation

download speeds up to 200 mbps.
 whole-home wifi
 unlimited data usage
 24/7 local support

This package is the bare minimum we would suggest for a home user.

\$59.95/month

download speeds up to 500 mbps.
 whole-home wifi
 unlimited data usage
 24/7 local support

This package is best for the gamer, as the name suggests, or the work-from-home, study-from-home user.

\$79.95/month

download speeds up to 1 gigbit
 whole-home wifi
 unlimited data usage
 24/7 local support

This package is for the multi-user, work and study from home, gaming and streaming, smart home device-using family. This package offers speeds 100X faster than traditional internet.

\$99.95/month

N O C O N T R A C T S

Unlike some internet providers, we don't believe in charging a low introductory rate, only to change it in a few months. That means your rate will stay the same on day 730 as it was on day 1. That's not to say our internet rates won't ever increase, but we have no plans to increase your pricing at any certain anniversary with our service like some providers do.

Don't see a package that's available in your area right now? Call us at 270-887-0763 and we can advise whether improvements being made to our existing internet service mean better service from energynet for your home.

IT'S A PACKAGE DEAL.
